NOTE

1. All parameters NOT specially mentioned are measured at 230VAC input, rated load and 25℃ of ambient temperature.
2. In the PV Mode: Ripple & noise are measured at 20MHz of bandwidth by using a 12" twisted pair-wire terminated with a 0.1uf & 47uf parallel capacitor.
3. Tolerance : includes set up tolerance, line regulation and load regulation.
4. Turn off the output when input voltage is less than 160VAC.
5. The power supply is considered a component which will be installed into a final equipment. All the EMC tests are been executed by mounting the unit on a 720mm*360mm metal plate with 1mm of thickness. The final equipment must be re-confirmed that it still meets EMC directives. For guidance on how to perform these EMC tests, please refer to “EMI testing of component power supplies.”
   (as available on https://www.meanwell.com//Upload/PDF/EMI_statement_en.pdf)
6. The ambient temperature derating of 3.5℃/1000m with fanless models and of 5℃/1000m with fan models for operating altitude higher than 2000m(6500ft).

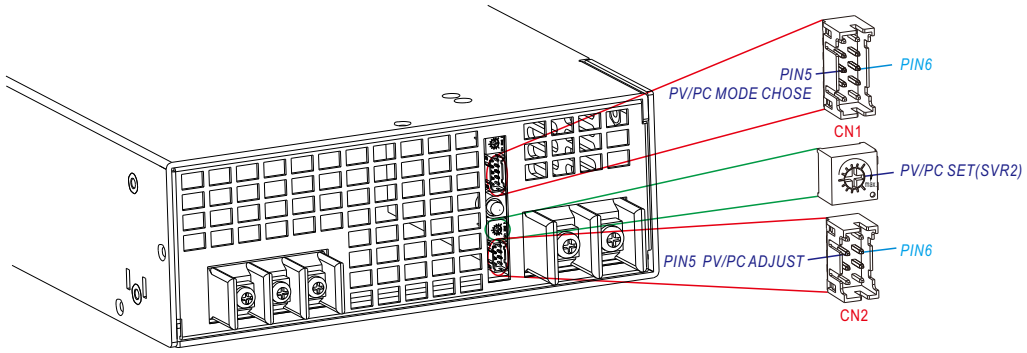
1. Output Voltage/Current Programming

※ Mode Setting

CN1:

	CONDITION	MODE	FUNCTION
PIN5/PIN6	SHORT	PV MODE	Output Voltage Programming
	OPEN	PC MODE	Output Current Programming

※ The factory default settings:PV mode output max voltage pin5/pin6 short by jumper cap.
When pull out the jumper cap,the default settings: PC mode output max constant current.



※ PV/PC Set adjustment

◎ Adjust the resistance(SVR2) can set output voltage or constant current point, the adjusting range is 20%-100% of max voltage or max constant current point.

◎ In the CN2, pin5/pin6 access external 10V voltage signal or 500-1KHz PWM signal can adjust the output voltage or constant current point.
CN2:PIN5/PIN6 needs to operate with a 10V sinking signal or PWM signal,Max. sink current 1mA.

2.Remote ON-OFF

※ Remote ON-OFF is activated by the configuration with respect to CN1 as shown in the following diagram.

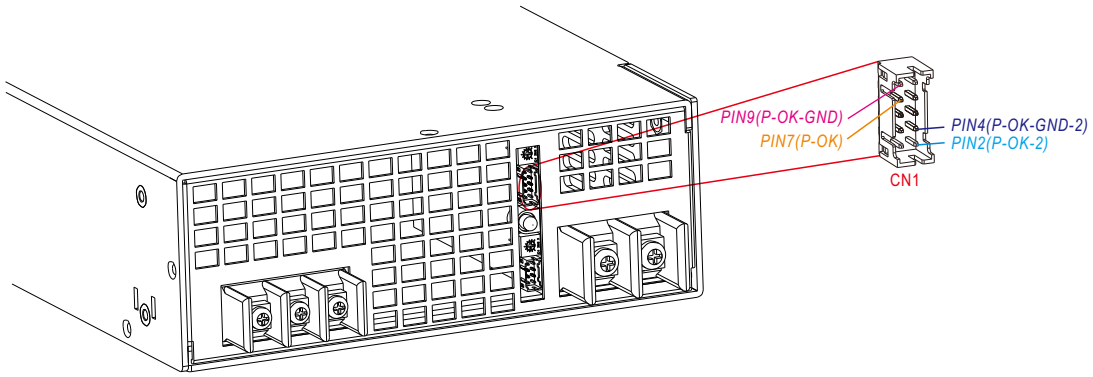
3.Alarm Signal Output

※ Alarm signal is sent out through "*P OK*" & "*P OK GND*" and *P OK2 & P OK GND2* pins on CN1. Please acknowledge an external voltage source is required for this function.



Function	Description	Output of alarm(P OK, Relay Contact)	Output of alarm(P OK2, TTL Signal)
P OK	The signal is "Low" when the power supply is above 80% of the rated output voltage, or, say, Power OK	Low (0.5V max at 500mA)	Low (0.5V max at 10mA)
	The signal turns to be "High" when the power supply is under 80% of the rated output voltage, or, say, Power Fail	High or open (External applied voltage, 500mA max.)	High or open (External applied voltage, 10mA max.)

4.Select Overload Protection Type

(1)Insert the shorting connector on CN1 that is shown in Fig 4.1, the Overload Protection Type will be "constant current limiting with delay shutdown after 3 seconds, re-power on to recover". This is the factory default.

(2)Remove the shorting connector on CN1 that is shown in Fig 4.2, the Overload Protection Type will be "continuous constant current limiting".

Overload Protection Type : constant current limiting with delay shutdown after 3 seconds

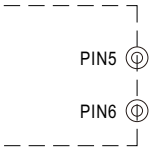

Fig. 4.2 Remove the CN1
Overload Protection Type : constant current limiting

5.Parallel

CSP-3000 can be connected in parallel, up to 3units, to provide higher output power.
When working in constant voltage parallel mode:
※Built-in active current sharing function
※Difference of output voltages among parallel units should be less than 0.2V(Can fine tune by SVR1)
※The total output current must not exceed the value determined by the following equation:
Maximum output current at parallel operation=(Rated current per unit)×(Number of unit)x0.9
※When out current<(50% rate current)×(Number of unit),
the current shared among units may not be fully balanced.
※CS+/CS- on CN1 are connected mutually in parallell (Note: CS+/CS- do not reverse connection).
※The "PV/PC" function is not available.

When working in constant current parallel mode:
※The load carried by each power supply cannot exceed 90% of the rated power
※The "PC" function can be used ,but the "PV" function is not available.

◎The power supplies should be paralleled using short and large diameter wiring and then connected to the load.
