3	TEMP. COMPENSATION	<p>SPECIFICATION: LCM-60 have the built-in temperature compensation function (T \uparrow , Io \downarrow). By connecting a temperature sensor (NTC resistor) between the NTC +/- terminal of LCM-60 and the detecting point on the lighting system or the surrounding environment, output current of LCM-60 could be correspondingly changed to ensure the long life of LED. 1.LCM-60 can still be operated well when the NTC resistor is not connected and the value of output current will be the current level that you set 2.</p> <table border="1"> <thead> <tr> <th>NTC resistance</th> <th>Output Current</th> </tr> </thead> <tbody> <tr> <td>220K</td> <td>< 60°C, 100% of the rated current (corresponds to the setting current level) >60°C, 100% of the rated current (corresponds to the setting current level)</td> </tr> <tr> <td>330K</td> <td>< 70°C, 100% of the rated current (corresponds to the setting current level) > 70°C, output current begin to reduce, details please refer to the curve.</td> </tr> <tr> <td>470K</td> <td>< 80°C, output current begin to reduce, details please refer to the curve. > 80°C, output current begin to reduce, details please refer to the curve.</td> </tr> </tbody> </table> <p>Notes: 1. MW does not offer the NTC resistor and all the data above are measured by using THINKING TTC03 series. 2. If other brands of NTC resistor is applied,please check the temperature curve first. 3. Synchronization function of the power supply will be invalid when the "temperature compensation" function is in use.</p> <p>TEST CONDITION : I/P : 230 VAC RESULT:OK</p>	NTC resistance	Output Current	220K	< 60°C, 100% of the rated current (corresponds to the setting current level) >60°C, 100% of the rated current (corresponds to the setting current level)	330K	< 70°C, 100% of the rated current (corresponds to the setting current level) > 70°C, output current begin to reduce, details please refer to the curve.	470K	< 80°C, output current begin to reduce, details please refer to the curve. > 80°C, output current begin to reduce, details please refer to the curve. NTC resistance	Output Current																																																					
220K	< 60°C, 100% of the rated current (corresponds to the setting current level) >60°C, 100% of the rated current (corresponds to the setting current level)																																																					
330K	< 70°C, 100% of the rated current (corresponds to the setting current level) > 70°C, output current begin to reduce, details please refer to the curve.																																																					
470K	< 80°C, output current begin to reduce, details please refer to the curve. > 80°C, output current begin to reduce, details please refer to the curve.																																																					

4 Dimming function

SPECIFICATION:
PUSH dim(primary side)

※Freely assignable (push) input

- The LCM BLE series also has one freely assignable AC mains (push) input. As with a CASAMBI sensor module, control pulses can be defined here (e.g. "controls a luminaire"; "controls an element"; "controls a group"; "controls scenes"; "controls all luminaires"; "change scenes"). See the reference connection figure in the above.

※Casambi Bluetooth control

- To be used through APP available on Apple Store and Play Store for iOS and Android.

TEST RESULT: OK

■APP SOFTWARE OVER TEMPERATURE PROTECTION

The real time Bluetooth IC temperature is shown in the APP. In case it reaches above 75 °C (equivalent to Tc 90°C), the driver will be turn off to provide a protection. In case the units is cooled down, it can be manually turn ON and back to normal operation again.

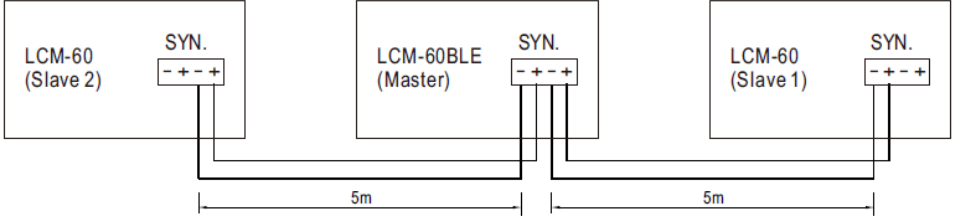

NOTE : 1.This software temperature protection is an extra independent function from driver its own hardware over temperature protection(when it is enabled, it needs re-AC power on to recover) and temperature compensation operation function described in the following section.
 2.In general the software temperature protection is triggered before the hardware one when in over temperature.

5 APP SOFTWARE OVER TEMPERATURE PROTECTION

■APP SOFTWARE OVER TEMPERATURE PROTECTION

The real time Bluetooth IC temperature is shown in the APP. In case it reaches above 75 °C (equivalent to Tc 90°C), the driver will be turn off to provide a protection. In case the units is cooled down, it can be manually turn ON and back to normal operation again.

NOTE : 1.This software temperature protection is an extra independent function from driver its own hardware over temperature protection(when it is enabled, it needs re-AC power on to recover) and temperature compensation operation function described in the following section.
 2.In general the software temperature protection is triggered before the hardware one when in over temperature.

6	SYNCHRONIZATION OPERATION	<p>SPECIFICATION:</p> <ul style="list-style-type: none"> • Synchronization up to 10 drivers (1 master + 9 slaves) • Dimming operating range : 10%~100% • Sync cable length : < 5m • Sync cable type : Flat cable • Sync cable cross section area : 22 – 24 AWG (0.2~0.3mm²)  <p>NOTE : 1. Please make sure all units are set to 100% dimming setting (factory default) before synchronizing. 2. Min. Dimming operating range depends on dimmer setting.</p> <p>TEST CONDITION : I/P : 230 VAC FULL LOAD</p> <p>RESULT:OK</p>	P
